

# Spencer Rise Community Solar Scheme

In the wake of the Climate and Cost of Living Crisis, I'm keen to help residents of Spencer Rise lower their energy bills and reduce their carbon footprint.

To do this, I'm exploring the the feasibility and cost, from a community perspective, of getting solar panels onto the roofs of properties in the street.

One of the key aspects of this project is to make it affordable and therefore accessible to as many residents as possible.

If you are interested in this and would like to find out more, please include your details below and I will email you with more information soon.
